CAPABILITIES

For many years now, Precise Time and Frequency has been providing precision frequency reference and redundancy capability for demanding applications, from highly competitive commercial broadcast and satcom systems to mobile military systems designed to withstand the most demanding environments.

Today's broadband communications markets are highly competitive, requiring reliable and dependable delivery of high quality service to subscribers. To perform, the systems require the absolute best in precision frequency references, and high reliability redundancy systems, at minimum cost.

Solutions include precision timing and frequency references, low phase noise RF sources, broadband RF and digital and optical distribution, a wide range of redundant switching solutions and much more.

With an installed base of hundreds of instruments in the SatCom market, ptf has the expertise and experience to deliver what is needed for your SatCom system to provide the performance expected.

With our extensive portfolio of products we can tailor a configuration to precisely match requirements, and deliver the specifications required.

ptf 3203A Frequency and Timing Reference

ptf 1203C Broadband RF Distribution

ptf 1207A Failsafe Multi Channel Redundant Switch
